HYBRID CLOUD ENGINEER

Hybrid Cloud Engineer and Application Developer with 6+ years of experience supporting enterprise technology environments, cloud platforms, Linux systems, web applications, automation, troubleshooting, and infrastructure modernization. Experienced across AWS, Azure, IBM Cloud, hosting platforms, PHP/MySQL applications, Docker, Git, DNS, SSL, cloud migration planning, and production support. Strong background in enterprise application delivery through IBM and hands-on cloud consulting through Cloud Technology Computing Corporation. Currently pursuing a Bachelor of Science in Cloud Computing at Western Governors University.

CORE SKILLS

Hybrid Cloud Engineering: Hybrid Cloud, Cloud Migration, Infrastructure Modernization, Datacenter Modernization, Cloud Architecture, High Availability, Disaster Recovery, Systems Administration, Enterprise Infrastructure

Cloud Platforms: AWS, Microsoft Azure, IBM Cloud, Google Cloud Platform Concepts, DigitalOcean, Cloud Hosting, Multi-Cloud Strategy, Cloud Cost Optimization

Virtualization and Infrastructure: Virtual Machines, Hypervisors, VMware Concepts, Linux Virtualization, Server Administration, Storage Concepts, Networking Fundamentals, Nutanix AHV and Prism Foundational Knowledge

Operating Systems: Linux, Ubuntu, Debian, Windows, Windows Server Concepts, Bash, Shell Scripting, Command Line

DevOps and Automation: Docker, Git, GitHub, GitHub Actions, CI/CD Concepts, Bash Scripting, Python, Deployment Automation, Technical Documentation

Networking and Security: TCP/IP, DNS, SSL/TLS, VPN Concepts, Firewalls, IAM Concepts, VLAN Concepts, Network Troubleshooting, Security Best Practices

Monitoring and Troubleshooting: Log Review, Root Cause Analysis, Incident Resolution, Performance Optimization, Application Support, System Troubleshooting

Development and Databases: PHP, MySQL, SQL, JavaScript, HTML, CSS, Bootstrap, REST APIs, WordPress, Web Applications, Mobile Applications

PROFESSIONAL EXPERIENCE

Cloud Technology Computing Corporation — Houston, TX

Founder / Cloud and Software Engineer

October 2023 – Present

Founded and operate a cloud computing and software development company providing cloud consulting, web development, managed hosting, SEO, automation, mobile development, and AI chatbot solutions for small businesses and entrepreneurs.

- Design, deploy, and optimize cloud-based websites and applications across AWS, Azure, Hostinger, and hybrid hosting environments.
- Evaluate hosting environments, migration options, DNS configurations, SSL certificates, databases, performance metrics, and deployment models.
- Build and maintain production websites, including cloudtechnologycomputing.com, arzugil.com, hybridclouddeveloper.com, and related cloud-focused platforms.
- Develop backend systems using PHP, MySQL, JavaScript, Bootstrap, and server-side logic to support forms, blog systems, comments, admin workflows, lead generation, and ecommerce features.
- Create cloud migration strategies comparing AWS Lightsail, AWS EC2, Azure hosting, dedicated hosting, shared hosting, and VPS environments.
- Support Linux-based hosting environments, including DNS records, SSL certificates, redirects, databases, file permissions, and server-side troubleshooting.
- Integrate e-commerce and payment functionality using Stripe, PayPal, product JSON structures, checkout workflows, and automated email receipts.
- Develop AI chatbot and automation solutions for client support, lead generation, customer engagement, and business workflow improvement.
- Use Google Search Console, analytics tools, PageSpeed Insights, and performance testing to identify infrastructure and application optimization opportunities.
- Translate client business requirements into technical solutions, migration plans, cloud strategies, and scalable application architectures.
- Document technical workflows, architecture decisions, troubleshooting steps, and deployment processes for repeatable client delivery.

Selected Achievements

- Helped a carpet cleaning client increase revenue by 300% through website, SEO, and digital technology improvements.
- Helped a gig-economy client transition into an independent private business model and increase earnings by approximately 250%.
- Built multiple business websites and mobile applications, demonstrating full-stack, cloud, and software engineering capabilities.

IBM — Baton Rouge, LA / Remote

Application Developer / Programming Specialist

March 2020 – October 2025

Supported enterprise application development, data analytics, automation, cloud technology, client solutions, and internal technical initiatives for a Fortune 500 technology company focused on enterprise software, cloud computing, artificial intelligence, and infrastructure innovation.

- Developed, supported, and maintained enterprise applications used by internal teams, clients, and business stakeholders.
- Worked across application development, data analytics, cloud concepts, automation, software troubleshooting, and enterprise technical support.
- Collaborated with cross-functional teams, senior leaders, technical stakeholders, and clients to gather requirements, resolve issues, and deliver business-aligned technology solutions.
- Supported data-driven applications involving extraction, processing, refinement, reporting, and presentation of business information.
- Participated in Agile ceremonies, technical knowledge transfers, client discussions, documentation, and solution planning sessions.
- Built and enhanced applications using JavaScript, Python, SQL, NoSQL concepts, APIs, and cloud-native development practices.
- Applied DevOps concepts including Git, GitHub, Docker, CI/CD, testing, deployment support, and continuous improvement.
- Supported cloud-related learning and implementation efforts involving IBM Cloud, Azure fundamentals, containers, application modernization, and hybrid cloud concepts.
- Completed IBM's Department of Labor-certified Application Developer Apprenticeship with hands-on training in full-stack development, APIs, DevOps, cloud technologies, microservices, testing, software architecture, Agile, and client engagement.
- Delivered application development projects for enterprise clients, including Norfolk Southern, improving operational efficiency and client satisfaction.
- Recognized for rapid professional growth, earning multiple promotions in less than three years.

Relevant Enterprise Experience

- Supported enterprise technology environments requiring reliability, documentation, collaboration, troubleshooting, and production awareness.
- Worked with technical teams to diagnose application, system, data, and workflow issues.
- Applied cloud computing fundamentals, including IaaS, PaaS, SaaS, scalability, elasticity, virtualization, containers, and cloud migration concepts.
- Translated technical issues into business-friendly language for stakeholders and clients.

PROJECT EXPERIENCE

Hybrid Cloud Hosting and Migration Evaluation

Cloud Technology Computing Corporation

- Migrated and tested business websites across dedicated hosting, AWS, Azure, VPS, and shared hosting environments.
- Evaluated AWS EC2, AWS Lightsail, Azure hosting, Hostinger, and traditional hosting options for real-world business workloads.
- Used PageSpeed Insights, Google Search Console, analytics, and manual testing to compare performance between cloud and non-cloud deployments.
- Documented tradeoffs between managed hosting, cloud infrastructure, custom backend systems, and dedicated environments.
- Recommended deployment models based on performance, cost, maintainability, reliability, and business value.

Linux, Database, and Web Application Infrastructure Support

- Configured and supported PHP/MySQL website backends, database connections, admin panels, comment moderation systems, form processing, and secure backend workflows.
- Troubleshoot DNS, SSL, database access, PHP configuration, file structures, redirects, hosting issues, and server behavior.
- Used Linux command-line knowledge, Bash concepts, and hosting control panels to manage production website infrastructure.
- Built custom web applications requiring backend logic, frontend interfaces, database storage, form validation, and deployment troubleshooting.

AI Chatbot and Automation Platform Development

- Built custom AI chatbot solutions for websites using JavaScript, backend logic, and cloud-hosted application workflows.
- Designed chatbot use cases for customer support, lead generation, FAQ automation, and small business productivity.
- Integrated AI concepts with cloud-hosted websites, business processes, and customer-facing digital experiences.
- Planned expansion into Python-based AI workflows, retrieval-augmented generation, and business automation tools.

EDUCATION

Western Governors University

Bachelor of Science in Cloud Computing

In Progress

Relevant Coursework: Cloud Architecture, Networking, Linux, Security, Virtualization, AWS, Azure, Scripting, Systems Administration, Cloud Operations, Infrastructure, Databases, and Cloud Migration

TECHNICAL TRAINING

IBM Application Developer Apprenticeship

Department of Labor-Certified Apprenticeship Program

Completed 12-month technical training program focused on application development, algorithms and data structures, web development, enterprise software development, Docker, Agile, cloud computing, DevOps, APIs, testing, and software engineering principles.

42 Silicon Valley

Piscine Software Engineering Program

Completed intensive programming and problem-solving training focused on C/C++, Linux command line, peer code reviews, algorithms, memory management, and software development fundamentals.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate
AWS Certified Cloud Practitioner
Microsoft Certified: Azure Fundamentals
CompTIA A+
CompTIA Network+
Linux Essentials – Linux Professional Institute
IBM Cloud Essentials
IBM Cloud Computing Fundamentals
IBM Building Cloud-Native and Multicloud Applications
IBM Journey to Cloud: Orchestrating Your Solution
IBM Application Developer Apprenticeship
IBM Docker Essentials
IBM Agile Explorer
IBM Enterprise Design Thinking Practitioner
IBM Security and Privacy by Design Foundations
SAP Analytics Cloud

Additional credentials across AI, machine learning, big data, blockchain, data science, automation, security, and enterprise application development.

ATS KEYWORD SUMMARY

Hybrid Cloud Engineer, Cloud Engineer, Infrastructure Engineer, Cloud Migration, Infrastructure Modernization, Datacenter Modernization, AWS, Azure, IBM Cloud, Google Cloud Platform, DigitalOcean, Linux, Ubuntu, Debian, Windows Server, VMware, Virtual Machines, Hypervisors, Docker, Git, GitHub, CI/CD, Bash, Python, PHP, MySQL, SQL, JavaScript, REST APIs, DNS, SSL/TLS, IAM, VPN, Firewalls, TCP/IP, Network Troubleshooting, Systems Administration, Application Support, Incident Resolution, Root Cause Analysis, Performance Optimization, Technical Documentation, Agile, DevOps, Cloud Architecture, High Availability, Disaster Recovery.
