Houston, Texas | 713-870-9966 | Jgil20@me.com | www.arzugil.com | linkedin.com/in/jhongil | Company: www.cloudtechnologycomputing.com

SUMMARY

Full Stack Web Developer and former IBM Application Developer Programming Specialist with more than five years of enterprise technology experience and approximately eight years of programming and web development experience. Skilled in developing, testing, maintaining, and optimizing responsive websites and database-driven web applications using PHP, MySQL, JavaScript, HTML5, CSS3, REST APIs, and cloud services.

Experienced in translating business requirements into functional web solutions, maintaining production applications, troubleshooting defects, integrating external services, improving website performance, and collaborating with technical and nontechnical stakeholders. Founder of Cloud Technology Computing Corporation, where I design and maintain custom business websites, content management features, AI integrations, payment systems, analytics solutions, and cloud-based applications.

EDUCATION

Western Governors University

Bachelor of Science in Cloud Computing — In Progress, Relevant studies include cloud architecture, networking, security, Linux, scripting, databases, web development, automation, systems thinking, and information technology.

IBM Application Developer Apprenticeship

U.S. Department of Labor Registered Apprenticeship, Completed intensive training in: Full-stack application development, Java, JavaScript, Python, SQL, and APIs, Agile and Scrum development, Git, Docker, DevOps, and CI/CD, Cloud computing and application deployment, Software testing and production support, Algorithms, data structures, and secure development

42 Silicon Valley

Computer Programming Intensive, Completed project-based programming training emphasizing C, C++, algorithms, debugging, problem-solving, peer review, and independent software development.

EXPERIENCE

Founder, President and Full Stack Web Developer

October 2023–Present

Cloud Technology Computing Corporation

Houston, Texas

- Design, build, test, deploy, and maintain responsive websites and web applications using PHP, MySQL, JavaScript, HTML5, CSS3, Bootstrap, and cloud technologies.
- Translate business objectives and customer requirements into secure, maintainable, and user-friendly web properties.
- Develop database-driven applications with reusable PHP components, MySQL databases, PDO prepared statements, server-side validation, and dynamic content.
- Created a custom PHP and MySQL blog management system supporting posts, categories, comments, page views, metadata, social sharing, and search-engine-friendly URLs.
- Build and maintain dynamic website components, including service pages, contact forms, lead-generation tools, navigation systems, reusable footers, blog listings, and administrative workflows.
- Integrate third-party platforms and APIs, including Gemini-powered AI chatbots, Stripe, PayPal, Google Analytics, Google Search Console, and email delivery services.
- Developed chatbot functionality that sends browser requests to secure PHP endpoints, processes API responses, and displays interactive results to website visitors.
- Maintain WordPress and custom-coded PHP websites across a portfolio of business, technology, service, and e-commerce domains.

- Diagnose and resolve PHP errors, MySQL foreign-key conflicts, database parameter issues, broken file dependencies, server errors, and unsuccessful third-party integrations.
- Optimize images, scripts, stylesheets, caching, page structure, and database queries to improve website loading speed and Core Web Vitals.
- Apply mobile-first and responsive design techniques so websites operate properly across desktop computers, tablets, and mobile devices.
- Implement structured metadata, canonical URLs, Open Graph tags, schema-related content, accessible image descriptions, and SEO-friendly page structures.
- Gather feedback from users and stakeholders, evaluate requested improvements, and convert approved ideas into production website changes.
- Manage Linux-based hosting environments using cPanel, Apache, Cloudflare, SSL certificates, domain configuration, DNS, backups, and deployment tools.
- Use Git and GitHub practices to organize source code, track changes, troubleshoot regressions, and maintain application stability.

Application Developer Programming Specialist

IBM

March 2020–October 2025

Baton Rouge, Louisiana / Hybrid

- Supported enterprise application development, data analytics, reporting, testing, maintenance, and production issue resolution for large-scale client environments.
- Participated in Agile discovery sessions, requirements reviews, design discussions, sprint planning, testing activities, and stakeholder demonstrations.
- Worked with business users, developers, analysts, and technical leads to convert functional requirements into reliable application and reporting solutions.
- Developed and maintained application components using JavaScript, Java, Python, SQL, cloud services, APIs, and enterprise development tools.
- Investigated production issues, identified root causes, documented findings, implemented corrections, and recommended preventive improvements.
- Participated in code reviews, application testing, defect resolution, source-control activities, and technical documentation.
- Created and validated SAP Analysis for Office and SAP Analytics Cloud reporting solutions for a Fortune 500 transportation client.
- Delivered 24 of 58 assigned Analysis for Office reports while supporting formatting, dynamic calculations, master data, hierarchy validation, and business-rule testing.
- Performed data validation across SAP S/4HANA Group Reporting, CDS views, reporting applications, and spreadsheet-based business outputs.
- Created unit-testing documentation, validated expected results, tracked defects in Jira, and coordinated corrections with functional and technical teams.
- Helped deliver more than half of the contracted analytics reporting scope ahead of schedule and within project expectations.
- Supported an early IBM project related to pandemic-assistance claims processing and high-volume application operations.
- Communicated technical findings in understandable language to business users, project leaders, and stakeholders with varying levels of technical experience.
- Completed extensive training in full-stack development, application security, APIs, databases, Agile delivery, DevOps, Docker, cloud computing, testing, and enterprise software development.

Freelance Full Stack Developer

Independent Web Developer

2018–Present

Houston, Texas

- Build and maintain websites for personal, business, portfolio, informational, and e-commerce use cases.
- Develop responsive page layouts and reusable components using HTML, CSS, JavaScript, PHP, Bootstrap, and MySQL.
- Create contact forms, user-input workflows, database integrations, blogs, analytics dashboards, payment features, and API-connected applications.
- Assist clients and users with website changes, hosting issues, domain configuration, mobile compatibility, content updates, and performance improvements.

- Test websites across browsers and screen sizes and correct usability, styling, navigation, and application defects.
- Maintain a portfolio of custom-coded and WordPress-based websites and continuously improve their functionality, reliability, accessibility, and search visibility.

PROJECTS

Cloud Technology Computing Website | PHP, MySQL, JavaScript, HTML5, CSS3, Bootstrap

- Designed and developed a responsive business website offering cloud consulting, AI automation, web development, mobile application development, SEO, and data services.
- Built dynamic service pages, lead-generation forms, blog functionality, case studies, payment integrations, analytics tracking, and downloadable digital content.
- Implemented MySQL-backed content management features and secure PHP database operations.

ArzuGil Developer Portfolio | PHP, MySQL, JavaScript, PWA Technologies

- Developed a custom portfolio website presenting professional experience, certifications, software projects, technical articles, and application-development work.
- Added dynamic blog content, comments, social sharing, metadata, analytics, mobile responsiveness, and progressive web application functionality.
- Improved performance using WebP images, service workers, deferred assets, browser caching, and frontend optimization.

AI Website Chatbot | JavaScript, PHP, REST APIs, Gemini

- Developed an interactive AI chatbot for business websites using JavaScript on the frontend and PHP-based API processing on the server.
- Added input validation, asynchronous requests, error handling, dynamic message rendering, and lead-engagement functionality.
- Designed the integration so API credentials remain on the server rather than being exposed in browser code.

Custom PHP and MySQL Blog Platform | PHP, MySQL, PDO, JavaScript

- Created a relational blog database with posts, categories, comments, metadata, publication status, and view-tracking functionality.
- Developed reusable queries and PHP templates for post listings, individual articles, recent content, and category-based navigation.
- Troubleshoot foreign-key constraints, PDO parameter mismatches, missing configuration dependencies, and database-integration errors.

Mobile Web Applications | Android, iOS, JavaScript, WebView

- Developed and maintained mobile applications that connect users to responsive web platforms.
- Worked with WebView navigation, external links, caching, mobile layouts, application packaging, and store-submission requirements.
- Published and managed applications through mobile developer platforms and addressed technical and usability feedback.

TECHNICAL SKILLS

Front-End Development: HTML5, CSS3, JavaScript ES6+, responsive design, Bootstrap, AJAX, JSON, DOM manipulation, mobile-first development, React fundamentals, component-based UI development

Back-End Development: PHP, object-oriented PHP, Node.js, Python, Java, RESTful APIs, server-side validation, session management, authentication, CRUD applications

Databases: MySQL, SQL, relational database design, PDO, prepared statements, foreign keys, database normalization, query optimization, data validation

Content Management: WordPress, custom PHP content management systems, dynamic blog platforms, reusable templates, content publishing workflows

Cloud and DevOps: AWS, Azure, IBM Cloud, Docker, Git, GitHub, Linux, Apache, cPanel, Hostinger VPS, Cloudflare, CI/CD concepts

Web Services and Integrations: REST APIs, Gemini API, PayPal, Stripe, email services, Google Analytics 4, Google Search Console, social media integrations

Testing and Optimization: Functional testing, unit testing, debugging, browser compatibility, responsive testing, performance optimization, Core Web Vitals, accessibility fundamentals, SEO

Enterprise Tools: Agile, Scrum, Jira, SAP Analytics Cloud, SAP Analysis for Office, S/4HANA, Microsoft Excel, Git-based version control

CERTIFICATIONS

AWS Certified Solutions Architect – Associate, 2026

AWS Certified Cloud Practitioner

Microsoft Certified: Azure Fundamentals

CompTIA A+

CompTIA Network+

Linux Professional Institute Linux Essentials

CompTIA IT Operations Specialist

SAP Certified Application Associate – SAP Analytics Cloud

IBM Enterprise Design Thinking Practitioner

IBM Agile Explorer

IBM Docker Essentials

IBM Cloud Essentials

IBM Security and Privacy by Design

IBM Machine Learning Specialist – Associate

IBM AI Associate Data Scientist

Additional IBM cloud, data, automation, development, and security credentials

PROFESSIONAL STRENGTHS

- Full-stack application design and maintenance - Clean, reusable, and maintainable code - Responsive and mobile-first web development - Requirements gathering and solution discovery - Production debugging and root-cause analysis - Constructive response to design and code feedback - Collaboration and shared ownership - Written and verbal communication - Managing evolving priorities and project requirements - Continuous learning and technical problem-solving
